

Niklaas Dumroese

AI GTM OPERATIONS

I run GTM operations and AI enablement for marketing teams — owning the frameworks, systems, and workflows that determine how the function executes. At Pleo that means marketing ops governance, HubSpot ownership, reporting cadence, and data quality programmes running alongside a production AI layer that automates execution and scales output. My work sits at the intersection of operational rigour and AI adoption: clean processes, trusted data, and a team that knows how to use its tools well.

EXPERIENCE

AI & GTM Operations Enablement Manager | Pleo

Jul 2026 – present

Revenue Operations

- Own Marketing Ops process governance: campaign workflow intake, approval processes, and HubSpot workflow health — building auditable documentation that eliminates tribal knowledge dependency and reduces turnaround friction.
- Run the marketing reporting cadence (MBR/QBR) and data governance programme: attribution consistency, lifecycle stage alignment, and cross-stack data quality — partnering with Data and BAT teams to resolve issues upstream rather than patching downstream.
- Lead AI adoption across MOps workflows: translating AI capability into durable operational processes with the governance and team enablement that makes tools stick beyond the pilot.
- Drive team capability through shared standards, QA checklists, and onboarding resources — raising the operational floor across the marketing function.

Marketing Enablement & Efficacy Lead | Pleo

Feb 2026 – Jun 2026

- Designed and built a production agentic system for a 30+ person marketing team: multi-agent orchestration with specialised skills, tool-use patterns, MCP integrations (Canva, Linear, Miro), and autonomous 24/7 operation — including inter-agent communication patterns where orchestrator agents coordinate specialised subagents in parallel. Content generation, data refresh, reporting, and knowledge maintenance all agent-operated without manual triggers.
- Built self-improving feedback loops from scratch: weekly reflection agents propose rule changes, monthly evolution cycles auto-approve improvements if benchmark scores increase, and decay-weighted memory scoring promotes high-value knowledge — the system gets sharper over time without someone kicking it off.
- Designed evaluation frameworks for agent quality: skill-trigger accuracy benchmarks, output quality evals, and retrieval precision metrics with regression tracking stored in a structured benchmarks layer.
- Built a RAG-style memory and retrieval architecture: ~1,000-document vector-indexed wiki, semantic search, context-budget management, and automated pruning — enabling agents to operate within token constraints while preserving relevant context across sessions.
- Drove team adoption from zero infrastructure to 74% daily AI tool usage (n=23 survey, March 2026); shipped 3 workflows into active production use; led AI enablement workshop and built role-specific onboarding guides across 6 marketing functions.

Performance Marketing Specialist → Senior | Pleo

Oct 2021 – Feb 2026

- Built the technical foundation the current agentic layer runs on: owned Segment CDP end-to-end, implemented CAPI events with high-quality matching parameters, and liaised between marketing, product, data, and legal teams to maintain clean, GDPR-compliant data pipelines across the function.
- Built an incrementality testing framework from scratch using Python and ads platform APIs, improving CAC by ~15% and establishing the experimentation culture that now underpins agent-driven creative testing.
- Implemented lifecycle-stage based conversion events and automated internal reporting tools, closing gaps between in-platform and backend data — improving CVR by ~7%, contributing to 2M€+ ARR uplift, and improving open pipeline generation by ~10%.

Paid User Acquisition Manager | Quandoo

Jun 2019 – Sept 2021

- Managed Google, Bing, and Meta campaigns with 6-digit monthly spend; built automated campaign structures via Search Ads 360; designed and analysed A/B tests in SQL.

EDUCATION

Bachelor of Arts: Political Science

The University of Montana
Missoula, Montana, USA

SKILLS

Agentic Systems

Multi-agent orchestration, skill/tool/memory/eval decomposition, self-improving feedback loops, MCP, RAG architecture, vector search, context management, Claude / Claude Code

Evals & Observability

Benchmark design, regression tracking, output quality scoring, retrieval precision metrics, structured logging

Data & Analytics

Python, SQL, BigQuery, ARIMAX / marketing mix modelling, Amplitude, Looker Studio, Fivetran, Streamlit

Marketing Infrastructure

Segment (CDP), CAPI, Google Tag Manager, HubSpot, incrementality testing, Google Ads, Meta Ads, Search Ads 360

Web

HTML, CSS, JavaScript

CERTIFICATIONS

Google Tag Manager
Google Ads — Search & Display
Google Analytics
Search Ads 360
